

01 Urban Capability Operating System

Jing-Zhang Urban Capability Exchange / City First, AI Backstage

One Capability Backbone links five Learning Units. AI enters through diagnosis, risk authorization, reversible trials, public-value review, capability exchange and retirement. SITE_BOUNDARY / KEY_AREA remain provisional, not official redlines.

Jing-Zhang Urban Capability Exchange | Structure & Evidence

City OS / Capability Backbone / Public Value

CITY OS CORE LOOP

- 01 Urban problem
- 02 Eligibility gate
- 03 Risk authorization
- 04 Reversible test
- 05 Public-value review
- 06 STOP / MODIFY / CONTINUE / SCALE
- 07 Capability exchange
- 08 Version release / retirement

PROVISIONAL CONSTRAINT — NOT OFFICIAL REDLINE
All crossings, hosts and statutory controls require verification

02 Spatial Structure and Five Sections

Permanent / Adaptive / Experimental

Ordinary walking, shade, accessibility, fire safety and non-AI services work first; PCI is added second. Railway memory, slow-mobility stitches, blue-green networks, capability nodes and event operations form the six-layer Backbone.

03 Three Key Areas: Organizer-Named Deepening Tasks

Zhongzhiyuan / AI Origin / Dazhongsi

Three Key Areas — Differentiated Detailed Design

Verification Campus

Technology production + higher-risk validation

• Ordinary city first

• Tests include bypass

• STOP/removal designed in

Learning Neighborhood

Social learning + public service

• Staffed/non-AI parity

• Personalization requires consent

• Vulnerable outcomes separate

Market & Service Commons

Market + AI-native service validation

• Mixed commuters/merchants/couriers/residents

• Validate in daily life

• Not a closed tech park

Zhongzhiyuan: Fifth Ring access, Qinghe culture, building-green-water integration and governance tests. AI Origin: university conversion, Wudaokou/Qinghuadongluxikou TOD research and low-disturbance renewal. Dazhongsi: AI-native services, station four-quadrant walking, bicycle/static traffic and composite green-space use. All are conceptual tasks pending professional verification.

Every item is gated by organizer polygons, ownership, road redlines, statutory controls, utilities and field evidence before deepening.

04 AI Ecosystem, Scenarios and PCI

6 global cases / 8 personas / 12 scenarios / 4 bounded tests

PCI layers: Non-AI Baseline / Ambient / Consent / Human Override / Failure-Safe / Public Learning Record. Bounded tests require nonparticipant bypass, human STOP authority and exit conditions.

Public Capability Interface | City First, AI Backstage

Orange devices are replaceable interfaces; shade, seating, staffed service, accessibility, bypasses and civic memory are long-term urban assets.

05 Public Realm, Character and Time Landmarks

1909 → 2026 → Future + Retired Archive

No invented statutory numbers: stepped height, capacity-gated intensity, porous massing, fifth-facade roofs and a public-service aesthetic guide later professional design. Statutory FAR/height/setbacks remain Unknown.

06 Long-Term Operations: Full agent.6

Continuous learning + annual City Version Release

Annual Urban Learning Conference; Developer Commons;
Scenario Open Days; accessible public experience route;
bilingual international communication;
Challenge→Sandbox→Pilot→Public-Value
Review→procurement/partnership/scaling consideration. No
guaranteed government purchase or partnership.

Jing-Zhang City Version Release | Accountability, Not a Leaderboard

ADDED

MODIFIED

SCALED

RESPONSIBLE STOP

RETIRED

UNRESOLVED

Illustrative structure only — no live operating counts are claimed.

Problem + baseline
Authorization + experiment record
Public-value outcomes
Complaints / override / incidents
Transfer + revalidation
Retirement + data disposition
Next-year unresolved problems

07 Metrics and Evidence: Define, Do Not Fabricate

UAR + organizer industry/talent metrics

Organizer interfaces added as unknown/null: AI Innovation Index, AI Talent Density, AI Output Value, AI Industry Space Scale and Industry Function Mix. OSM live materialization=5,532 features / 1,898 buildings; Microsoft target partition=0. Both remain candidate/coverage evidence, never statutory survey.

Urban Adaptation Rate | Learning Is Not Deployment Counting

UAR = verified improved eligible issues / evaluable qualified issues

Responsible STOP = learning/safety outcome, not automatic adaptation credit

Public Dashboard

UAR	Unknown
Null until real operation	
STOP rate	Unknown
Publish stops, not hide failures	
Override	Unknown
Human takeover must be measurable	
Transfer	Unknown
Revalidate before transfer credit	
Non-AI parity	Unknown
Usable when AI declined/offline	

08 Official Task Coverage and 20-Year Legacy

agent.1–agent.6 / persistent civic assets

Naming/Open Node VI, six global cases, 12 scenarios, 8 personas, four bounded tests, 3+ time landmarks, railway/Zhongguancun/AI cultural narrative, annual activities, developer operations, open scenarios, public route, international communication and attraction/conversion are all readable outputs.
